Kiwi Cover Mutual (KCM) - Claims handling modernisation
Client brief

Prepared by Hana Te Rangi, Head of Claims. 9 March 2026.
(Fictitious example document, written for the Gantry example.)

1. Why now

A member who makes a straightforward home or motor claim waits a median of 12.4 working days from notification to payment. Members expect five.

Every claim touches four separately operated systems: Policy Data Management on the mainframe, the CRM System, the Home & Away Financial Application and the document management system. A handler keys the claim into each of them.

Around 18 percent of claims are re-keyed at least once.
Only two contractors still hold mainframe skills, so the risk grows every year.

The platform was inherited from the 2014 ArchiSurance merger and was never integrated.

2. What good looks like

- Median notification-to-payment time for standard claims at or below five working days, within two quarters of go-live.
- Claim re-key rate below three percent.
- Ninety-five percent of approved claims paid within one working day.
- No increase in the fraud referral rate, and no loss of audit trail, checked at the first post-go-live audit.

3. Boundaries

- Policy Data Management stays the system of record for policies and the claims ledger.
- Claims data stays in New Zealand. Everything runs in the Wellington data centre; no cloud landing zone is approved for member data yet.
- The CRM System and the Financial Application are extended, not replaced.
- Out of scope: underwriting, pricing and product configuration; broker, partner and mobile channels; fraud analytics beyond the existing referral rules.

4. Timing and money

- Three increments over about nine months: Register and Accept, then Valuate, then Pay.
- The BIBIT payment gateway must go live within its current contract term.
- Delivery is funded from the 2026 operating budget; there is no contingency for a separate platform purchase.

5. People

- Sponsor and process owner: Hana Te Rangi, Head of Claims.
- Delivery lead: Priya Natarajan, Solution Architect.
- Treasury (BIBIT contract): Anaru Pihema.
- Records Management (retention rules): Karen Doyle.
- Privacy Office (member consent and PIA): Elena Rossi.

6. What we are asking of the design

One Handle Claim process on shared customer, policy and claim data, so a member reports a claim once and is paid the day it is approved.
